INSURANCE

All buyers assume risk of the animal upon purchase and are encouraged to purchase insurance.

VIDEOS

Videos may be viewed at drycreekranchnnd.com.

VIEWING CATTLE

Cattle will be available to be viewed at any time at the ranch.

GENOMIC TESTING

All Red Angus bulls have been GGP-uLD tested for increased accuracy EPDs and parent verification.

GUARANTEE

Bulls are guaranteed to breed their first season defined as 90 days following turn out. A breeding soundness exam will be done prior to delivery. If a bull is proven unable to breed for that exam, buyer will be given a full refund or purchase price credit to next year's bulls, or replacement of bull of equal quality as acceptable to buyer. If problem arises with a bull, please notify us immediately.

DELIVERY

We will deliver up to 300 miles at no charge. If you are farther than 300 miles, we will work to make arrangements with you. We will keep bulls and continue to develop them until April 15th or when they are fertility tested. Following fertility testing, delivery arrangements will be made. Delivery of females is the buyer's responsibility.

TERMS & CONDITIONS

Bulls are offered on a first come, first serve basis with offers being accepted beginning March 3. Terms of the sale are cash unless other arrangements have been made. We require 100% of purchase price at time of commitment.

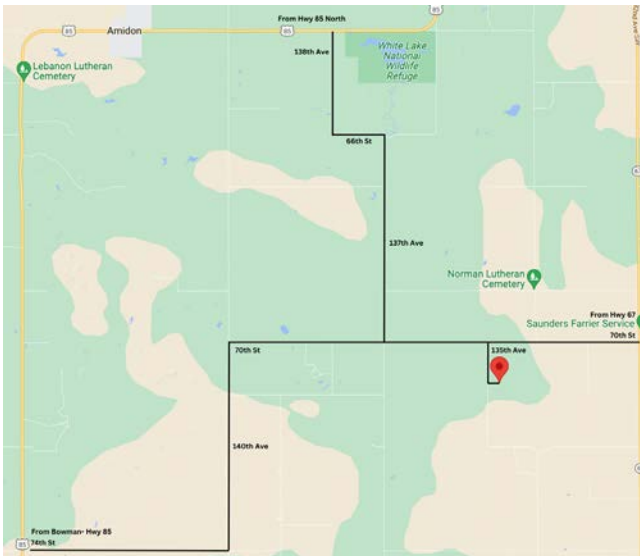

BULL DEVELOPMENT

We only keep the top end of calves as bulls. Our bulls are developed in a pasture environment on free choice hay and supplemented with a bull developer pellet along with a full mineral package. They are developed slowly for a moderate rate of gain with longevity being the ultimate goal in mind. We want to develop bulls that are going to last for years to come!

Photos & Videos were done by Hennessy Livestock Promotions.

MAP TO THE RANCH

BULL DEVELOPMENT PASTURE

WELCOME!

Welcome to our 2024 Private Treaty Sale!

The last year has been busy as ever. With record rains and abundant grass, we feel blessed to be living this lifestyle! Each and every day we are working towards building our operation without sacrificing any quality or genetics along the way. With that, we were able to purchase another group of bred cows last winter from Jesse and Rita Locken. The Locken's had built up a great herd with genetics from some of the top Red Angus producers such as Twedt Red Angus, 9 Mile Red Angus, Grassy Meadow Ranch, and Nordlund Stock Farm. The two service sires used on these cows were Rhodes Masterpiece H045 and 9 Mile Quarterback 5665-160. Two bulls that offer a lot of growth and look! We look forward to watching these cows work in our herd!

A new AI sire that we used this year Duff Red Blood 18114. We are excited about all the calves on the ground out of this bull. He may not be the growthiest bull around, but he makes them heavy muscled and big boned all packaged into a moderate frame size. This leads into our own herd sire, 7VRA Tyson 0722. He follows closely in the type and kind of the Red Blood bull. He's super good footed, stout, and so efficient. Two sires that work great on those bigger frame size cows.

This set of bulls offers a wide variety of capabilities. We've got the big, growthy bulls that will add pounds at weaning, but also have a very nice set of bulls that will offer calving ease and strong maternal characteristics that will make some beautiful females to put back into the herd.

Thank you for your consideration. We hope you will find a bull that will fit your operation. We strive to build a program with genetics you can trust! We look forward to seeing you at the ranch!

-Max, Haley, Little Max, and Hayes

THE ROBISON FAMILY & DRY CREEK RANCH

Dry Creek Red Angus was started back in 2015 when we bought our first set of registered cows. Since then, we have been slowly growing the herd adding in genetics from Pieper Red Angus, Bieber Red Angus, Twedt Red Angus, Wasem Red Angus, and Six Mile Red Angus. We keep back our own registered heifers every year to continue to grow our operation. Here at Dry Creek Ranch, we aim to produce a low maintenance animal that will thrive in any environment thrown its way. We have shifted our perspectives from traditional thinking and try to push our cows to perform and maintain through the winter on stockpiled forage or crop residue, feeding the least amount of hay possible. Our goal is to produce moderate but practical cattle. We have moved away from selecting cattle strictly based on EPDs and growth traits. We believe EPDs can be an important tool to use in selection, but they do not always reflect the profitability of an animal. Our cattle are raised to be structurally correct, good footed, and easy fleshing. We also rely heavily on docility and cull any animals that do not meet that requirement, especially for the kid's sake who are right alongside us tagging calves and working cows.

Our business is truly a family operation. We rely on each other to make our ranch a success! Max takes charge on feeding, building rations, fencing, and so much more as we continue to build and make improvements to our home place. Haley leads genetic selection, marketing, book work, website management, kid chasing, and also helps out with the day to day tasks of chores, haying, etc. The kids are always right there with us watching and learning every aspect of the ranch!

We are starting off our Private Treaty Sale with our newest herd sire group, Duff Red Blood 18114. DCCC Red Blood 2310 is one you won't want to miss! We found this mating to be a perfect fit. His dam is a Crump Supreme 7813 daughter from Twedt Red Angus that is backed with power and growth. His sire offers strong maternal characteristics and phenotypically almost flawless. This guy has stood out to us since day one. He sits in the top 2% in WW and 7% in YW. He's that perfect dark cherry red color, stands down on a ton of bone, and so much mass and body to him. We look forward to seeing what this guy can do in the future!

The first 7VRA Tyson 0722 sons to sell. If you need a heifer bull, these are the bulls for you. The Tyson sons are going to be extremely moderate framed, heavy muscled, good footed, and extremely efficient. Their sire keeps condition year-round no matter the quality of feed. He's extremely efficient and prolific. 2318 made his presence known from the start. He stands down on a ton of bone, is heavy muscled, and has an extremely attractive profile.

DCCC Tyson 2325 is the growtiest of the Tyson sons. A great heifer bull option. The Tyson sons have strong maternal numbers as well. Besides for the Tyson heifer we sold in the ND Red Select Sale, every Tyson daughter is going back into the herd. We are looking forward to seeing the lasting impact 7VRA Tyson 0722 leaves on our herd.

Red Angus Guide to EPDS and Indexes

ProS... Profitability and Sustainability is an all-purpose index that predicts average economic differences in all segments in the beef supply chain. This index is a combination of the breeding objectives modeled in the HerdBuilder and GridMaster selection indexes. In this index, replacement heifers are retained from within the herd and all remaining progeny are fed out to slaughter and sold on a quality-based grid. Traits included in this index include calving ease, growth, HPG, STAY, Mature Weight, Dry Matter Intake and carcass traits. The resulting index is expressed in dollars per head born (Index/High Value).

HB HerdBuilder is a maternal selection index that predicts the economic differences of animals for traits that are important from conception through weaning. Expressed as dollars per head born, HB is calculated based on the scenario that bulls are mated to heifers and cows, replacement heifers are retained and all remaining progeny are marketed at weaning. Traits included in the HB index include Calving Ease Direct, Calving Ease Maternal, Weaning Weight, Milk, Mature Weight, Heifer Pregnancy and Stayability (Index/High Value).

GM..... GridMaster is a selection index that predicts the average economic difference of non-replacement calves through the post-weaning phase of production. GM places selection pressure on growth, feedyard performance and carcass traits. Expressed as dollars per head born, GM is calculated based on the scenario that progeny are fed out to slaughter and marketed on a quality-based carcass grid. Traits included in GM include Average Daily Gain, Carcass Weight, Dry Matter Intake, Marbling, Back Fat and Rib Eye Area (Index/High Value).

CED Calving Ease Direct predicts differences in the percent of calves born unassisted out of 2-year-old dams. (Percent/High Value)

BW Birth Weight predicts differences in actual birth weight of progeny. (Pounds/Low Value)

WW Weaning Weight predicts differences in 205-day weaning weight. (Pounds/High Value)

YW Yearling Weight predicts differences in 365-day yearling weight. (Pounds/High Value)

ADG..... Average Daily Gain predicts differences in weight gain between 205 and 365 days of age. (Pounds/High Value)

DMI Dry Matter Intake predicts differences in daily feed intake as measured in a feedlot during the post-weaning period. (Pounds/Low Value)

MILK Milk predicts differences in weaning weight attributed to the milking ability of the animal's daughters. (Pounds/High Value)

ME Maintenance Energy predicts the difference in maintenance energy requirements. (Mcal per Month/Low Value)

HPG..... Heifer Pregnancy predicts differences in the percent of daughters who are able to conceive and calve at 2 years of age following exposure to breeding. (Percent/High Value)

CEM Calving Ease Maternal predicts differences in the percent of daughters who are able to calve unassisted as 2-year-old heifers. (Percent/High Value)

STAY..... Stayability predicts differences in the ability of an animals' retained daughters to remain productive in the herd – calve every year – through 6 years of age. (Percent/High Value)

MARB.... Marbling predicts differences in marbling score – amount of intramuscular fat measured at the 13th rib. (Marbling Score Units/High Value)

YG Yield Grade predicts differences in USDA Yield Grade, which is calculated using CW, REA and Fat. (Yield Grade Units/Low Value)

CW Carcass Weight predicts differences in actual hot carcass weight. (Pounds/High Value)

REA Ribeye Area predicts differences in square inches of ribeye area measured at the 13th rib. (Square Inches/High Value)

FAT..... Fat predicts differences in the depth of backfat measured between the 12th and 13th ribs. (Inches/Low Value)
